

A stacked bar chart showing the distribution of 1000 SNPs across 22 chromosomes. The x-axis is labeled 'Chromosome' and lists chromosomes 1 through 19, plus X. The y-axis represents the count of SNPs, ranging from 0 to 1000. Each bar is composed of segments of different colors: red, green, yellow, blue, and purple. The distribution is highly variable across chromosomes, with some chromosomes having a high proportion of red SNPs and others having a high proportion of green SNPs. Chromosome X is entirely purple.
